CORRECTION FACTORS FOR TARGET OF

Steel FE 360	1	Copper	1	Aluminum	1	Brass	1.3	Stainless Steel V2A 1/2 mm	0.4 / 0.7
--------------	---	--------	---	----------	---	-------	-----	----------------------------	-----------

CORRECTION FACTORS FOR EMBEDDABLE MOUNTING IN SUPPORT OF

Steel FE 360	0.75	Aluminum	0.9	Brass	0.75	Stainless Steel V2A	0.8
--------------	------	----------	-----	-------	------	---------------------	-----

Note: the operating distance of the sensor must be multiplied by the correction factor of the material. For example, the operating distance on Aluminum is $S_{n,Al} = S_n \times CF_{Al}$. In case of embeddable mounting, the distance is multiplied by the additional correction factor of the support, thus $S_{n,Al} = S_n \times CF_{Al} \times CF_{emb,Al}$.
